Our Activity Select screen is designed to be student-friendly while providing additional resources to students and teachers. The Activity Select screen is designed for students and teachers using individual login details. If you are not logged in as either, and are on the main subscription, you will see the student view.

1 The Student View

In Student View you will be able to see a list of all activities for the subject or activities sorted by standard. With the addition of the keywords, a glimpse of the activity and the addition of subtitles to differentiate between activity versions, we feel that students will find this new screen very user friendly.

After students have selected the grade level and subject they will see a list of all activities they can scroll through, or they can select a specific standard to narrow the list of activities. Once the student has selected an activity, the Activity Box will appear, where the student will click “Learn Area” or “Play Activity.” It is strongly suggested that students go to “Learn Area” before starting the activity. Also, within the Activity Box, the student can click “Want to learn more?” to see a list of activities for continued practice of the same standard.

2 The Teacher View

The Activity Select screen allows you to see a full list of activities or select a specific standard to narrow the list of activities. You can see the Standards Map by clicking after narrowing the list of activities to a specific standard. The new Activity Box provides teachers with access to Whiteboard Mode, Learn Area, Teacher Zone, and Extended Resources as well as access to play the activity and related keywords. As a teacher, you will only be able to access the additional resources that come with the Activity Box when logged in using your individual login details.
